ENSPRAY 99[®]

An emulsifiable, narrow range spray oil for the control of armoured scale on kiwifruit, armoured scale, greenhouse thrips and six-spotted mite on avocados, scale, aphids and mites on citrus, pip and stone fruits, and powdery mildew on grapes.

GROE99710/F01

ENSPRAY 99[®]
NET CONTENTS: 5 Litres

ACTIVE INGREDIENT: 821 g/L (980ml/L) mineral oil in the form of an emulsifiable concentrate. Unsulphonated residue not less than 99.0 %

Grosafe[®]

ENSPRAY 99®

HSNO HAZARD CLASSIFICATION: Aspiration hazard Category 1, Eye irritation Category 2, Designed for biocontrol action.

WARNING: Eye irritant. May be fatal if swallowed and enters airways.
ECOTOXIC: Harmful to aquatic life. Do not apply into or onto water. Avoid contamination of any water supply with product or empty container.
PERSONAL PROTECTION: When mixing or loading wear overalls, impervious gloves and eye/face protection. Avoid breathing spray mist. Wash hands and exposed skin after work.
STORAGE: Store in original container tightly closed and in a locked, dry, cool, well ventilated area, away from foodstuffs. When stored appropriately this product should show no significant degradation for 2 years from the date of manufacture. Contact the proprietor for further information about the use of this product if it is older than this.
SPILLS AND DISPOSAL: When dealing with spills wear personal protective clothing and equipment as described in the PERSONAL PROTECTION section. Contain and absorb with suitable inert absorbent material and store in properly labelled, sealed drums for safe disposal. If spray mixture is spilled absorb and collect in drums as above. Deal with all spillages immediately. If contamination of drains, streams, watercourses, etc. is unavoidable, warn the local water authority.
PRODUCT DISPOSAL: If possible dispose of by using according to the label, otherwise dispose of in an approved landfill or bury below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots.
CONTAINER DISPOSAL: Triple rinse container and add residue to mixture. Dispose of via an approved recycler.
SAFETY DATA SHEET: A safety data sheet is available from Grosafe Chemicals Ltd.

FIRST AID: For advice call a doctor or the National Poisons Centre (0800 764 766). If medical advice is needed, have product container or label at hand. If swallowed, rinse mouth. Do NOT induce vomiting. Call the National Poisons Centre or doctor immediately for advice. If in eyes, rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing. If eye irritation persists, get medical attention. If on skin, wash with plenty of soap and water. If irritation occurs, get medical advice.

EMERGENCY RESPONSE - 0800 CHEMICAL (0800 243 622)

GENERAL INFORMATION: EnSpray 99® is a highly refined narrow distillation range spraying oil which contains emulsifiers to facilitate mixing with water. It is **safe to use to mix product on animals.**

DIRECTIONS FOR USE: Mixing Instructions: Pour the required amount of water into the mixing tank then add EnSpray 99® and agitate well. When mixing with other pesticides add the other product first, according to the manufacturer's instructions, then add the EnSpray 99® last. Maintain continuous agitation while spraying.

Equipment: Using accurately calibrated and maintained equipment in accordance with the New Zealand Standard for the management of Agricultural Chemicals (NZS 8409). Apply only with ground-based application methods.

Restraints: Do not spray under conditions that cause slow drying: i.e. low temperatures, high humidity. Do not spray in the late evening or early morning or during the hours of darkness: this could cause damage to the fruit.
COMPATIBILITY: EnSpray 99® is believed to be incompatible with folpet, captan, carbaryl and dodine, and should not be applied within 4 weeks of these products, or within 14 days of applications of sulphur or lime sulphur, once crop growth has commenced. As information is gained recommendations may change: consult your local adviser and the label of the proposed additive. If doubt remains do not mix products.

WITHHOLDING PERIOD: 1 day.

RECOMMENDATIONS FOR USE: The rates suggested are for high volume spraying to run-off.

Notes:

- Sensitive varieties: Do not spray Cox's Orange or Pippin later than early Green tip.
- Do not spray Gala between tight cluster and early fruit development.
- In mixed blocks time the oil spray according to the earliest variety.
- Monitor early varieties for bud swell at least 3 weeks in advance of normal timing.
- Ensure crop is not under stress from drought or frost before application.

Crops / Pest	Rates and Timing	Comments
Avocados - For the control of armoured scale and greenhouse thrips.	1 litre /100 litres of water. Determine pest pressures by monitoring, or follow the high pest pressure recommendations as a precaution.	From late January to February apply two sprays one month apart. If pest pressure is high apply three sprays from Jan to April. May be applied once or twice, pre-flowering in Sept/Oct. Do not apply to plants under moisture stress.
For the control of six-spotted mite.	0.5 - 1 litre/100 litres of water.	To suppress six-spotted mite apply two sprays two weeks apart at first sign of infestation.
Citrus - For the control of scale insects, aphids, citrus red mite and thrips.	1 litre /100 litres of water. Apply during spring and summer.	Complete coverage is essential. Do not apply to citrus trees in hot dry weather when trees are suffering moisture stress. If pest populations are high or mealy bug is a problem add suitable insecticide.
Grapes - As a spray adjuvant for insecticides.	1 litre /100 litres of water. Apply from advanced bud swell to bud burst, mixed with a suitable insecticide.	EnSpray 99® will assist the spreading, adhesion and penetration of the insecticide into the bark crevices.
Powdery mildew control.	2 litres /100 litres of water.	Apply as a high volume spray to run-off. Repeat on a 7 - 10 day schedule. Allow a gap of 10-14 days pre and post a sulphur application. The action of EnSpray 99® is short lived: the use of a DMI fungicide may be required to maintain control over an extended break. May reduce the visible bloom on red varieties when used close to harvest. The use of this product may delay harvest by up to one week.
Kiwifruit (Hayward) - For the control of Armoured scale.	1 litre / 100 litres of water. Timing should be determined by monitoring.	Do not apply during the period from 14 days after fruit set. Should not be applied on th weather or if plants are under moisture stress. May be applied pre-flowering.

Notes: For Zespi Gold (Hort 16A): use at 1% and apply only up to 21 days after fruit set. Do not use on newer gold cultivars (eg G3) until crop safety has been established.

HOME GARDEN USE

Plants	Use	Rate
Deciduous plants: Apples, Pears and Stonefruit	For the control of European red mite, San Jose scale and aphids	15-20 ml per litre of water. For scale control apply during dormant period up until green tip
Citrus	For the control of scale insects, aphids, citrus red mite and thrips	
Evergreen Plants: Roses and ornamentals	For the control of European red mite, mealy bug, scale insects and aphids.	10 ml per litre of water.
If you have any doubt about crop safety contact Grosafe Chemicals Ltd, or apply to a small area first.		
Indoor Plants	Leaf polish. Apply with a soft cloth	5 ml per 200ml (1cup) of water.

Registered pursuant to the ACVM Act 1997, No P9104. See www.foodsafety.govt.nz for registration conditions.

Approved pursuant to HSNCO Act 1996, No HSR 100946. See www.epa.govt.nz for approval conditions.

WARRANTY This formulation is warranted to contain the specified active ingredient within accepted analytical tolerance when packed. The user bears the risk for damage resulting from factors beyond the manufacturer's control. The manufacturer declines all liability for damage resulting from improper storage or use of the product.
